

Changing the flow of rhinosinusitis research takes energy and enthusiasm.

A clinical study is a VIBRANT step forward.

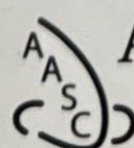

The VIBRANT study is evaluating a study drug injection given to adult participants with chronic rhinosinusitis with nasal polyps. During this study, you may also be given rescue medication to help control rhinosinusitis symptoms.

To be eligible for this study, you must be:

- 18 to 75 years of age
- Diagnosed with chronic rhinosinusitis with nasal polyps for at least 6 months

This is not a complete list of eligibility criteria. The study doctor will review the full entry criteria for this study with you.

For more information about the VIBRANT study, contact the study site.
